Wolfgang Bubberman

Trading Systems Engineer

Jurkyy
Wolfgang Bubberman
wbubberman.com

A driven computer scientist with expertise in trading systems, infrastructure, and machine learning. Currently a TradeOps Analyst at Hudson River Trading, working on trading systems and execution, and co-founder of WoTo, a SaaS company. Visit my website for more details on competencies and projects.

Skills

Programming Languages	C/C++, Python, Rust, Java, Assembly x86, Bash, TypeScript, MatLab, Prolog, R
Tools	Linux (Debian & NIX), Git, Kubernetes, Docker, Ansible, Kafka, Grafana, Prometheus and much more.
Communication	English (C2), Dutch (native), German (B2), Swedish (B1)

Technical Experience

TradeOps Analyst **06/2025 — Present**
Hudson River Trading - Full-time - Python, Bash *London, United Kingdom*
- Working on the infrastructure, latency optimization, and order routing of HRT's trading systems.
- Monitoring and supporting trading systems in production.
- Execution trading in HRT's Systematic Internaliser (SI); Series 57 licensed.

Co-Founder **09/2023 — Present**
WoTo - Part-time - Rust, TypeScript, Python *Delft, the Netherlands*
- Built a SaaS app for powerlifting coaches with 100+ monthly paying users.
- Developed entrepreneurial skills through hands-on business operations.

Trading Operations Engineer **08/2022 — 12/2024**
Flow Traders - Full-time - Python, C++, Java, Bash *Amsterdam, the Netherlands*
- Monitored, maintained, and improved one of the most advanced electronic trading systems in the world.
- Specialized in debugging ad hoc problems before and during market opening.
- Automated daily reference data imports and operational issue resolution.
- Built an internal solution for collecting and debugging configurations across all trading systems.
- Collaborated with exchanges (XLON, XETRA, TP/ICAP) on system migrations and operational issues.
- Leveraged monitoring and automation technologies: Prometheus, Grafana, and Airflow.

Chief Software Engineer **06/2021 — 06/2022**
Forze Hydrogen Racing - Full-time - C++, Python *Delft, the Netherlands*
- Developed embedded systems for the world's fastest hydrogen racing car.
- Designed a centralized system for data management and communication within the car.
- Created a Continuous Integration server for code management and testing.
- Collaborated with IBM on a telemetry system.

Software Engineer **10/2021 — 03/2022**
AISY Labs - Part-time - Python *Delft, the Netherlands*
- Developed a Side-Channel Analysis toolbox powered by deep learning, used by leading researchers in the field.

Teaching Assistant **02/2018 — 08/2021**
Delft University of Technology - Part-time - Java, Python, C++ *Delft, the Netherlands*
- Assisted students with course material and assignments across seven different courses.
- Reviewed and graded written and oral examinations.

Education

Master of Science in Computer Science **09/2020 — 07/2022**
Delft University of Technology
- Data science track with specialization in cyber-security.
- Thesis on profiled Side-Channel Analysis using higher-order univariate and multivariate data sets.
- Applied deep learning and AI techniques throughout the program.

Bachelor of Science in Computer Science & Engineering **09/2017 — 07/2020**
Delft University of Technology
- Minor abroad at KTH Royal Institute of Technology, Stockholm, Sweden.
- Participated in ten group projects, four as team lead.

Activities and Interests

Head of the board of D.S.K.V. IJzersterk. 08/2021 — 08/2022
Completed ethical hacking course at KTH Royal Institute of Technology. Fall 2019
Building trading systems with Rust in spare time.
Competitive powerlifter.
